February 19, 2021

## 1 Lab5 - Report - st121413

My only achivement is 2 functions.

1. I manage to load the weight of csdarknet
2. I manage to augment the image using imgaug but in the final code, I change to albumentations as suggested by prof. Matt. (The library looks cleaner)

The rest of the code is a combination of trial and confuse which I use Chichan code as a reference (another word for copy and fix)

Here is the experimental file. <https://github.com/akraradets/2021JanRTML/blob/main/lab5/yolov4%20train/lab5%20in%20lab.ipynb>

### 1.1 Result

The model loss did converged but is it correct? I am not even sure any of the step is correct. \*\*
